**Modified Cationic Protein Dispersion, used in ground coat to level out the absorption of subsequent coats and impart a natural aspect and handle. Can be polished.**

BRILLENTO 91 KT is the cationic casein binder of choice for obtaining a very good filling, levelling and for preparing ground for subsequent build up and anchoring of finish. Normally used on full grain leathers, it is also used with acrylics and polyurethane cationic binders in order to eliminate "low grain" defects. It forms a film of high gloss and clarity, imparts a proteinic touch, improves plate release and stacking properties.

BRILLENTO 91 KT can be used with PUD 48 KT and other cationic auxiliaries for polishing grounds. It can be cross-linked with Xama 7 to improve gloss, water resistance and other physical properties of the finish.
